

# African insurers take up climate change fight with \$14bn pledge

A group of over 85 insurers in Africa has pledged to create a financing facility to provide \$14bn of cover to help the continent's most vulnerable communities deal with climate-disaster risks such as floods and droughts.

Source: Reuters.

The commitment to create the African Climate Risk Facility (ACRF) was made on Wednesday during the Cop27 climate talks comes as developing countries push their richer peers to do more to help them pay for the costs of responding to such events.

Demand for compensation for the "loss and damage" caused by global warming has long been rejected by wealthy countries, whose leaders are wary of accepting liability for the emissions driving climate change.

Africa, which accounts for less than 4% of greenhouse gas emissions, has long been expected to be severely impacted by climate change.

Against that backdrop, the African insurance plan is based around creating a scalable, local market-based funding tool to help countries better manage the financial risk of climate shocks and increase the resilience of its more vulnerable communities, the group said in a statement.

"This is the African insurance industry saying let's come together and try and solve this ourselves," said Kelvin Massingham, director risk and resilience at FSD Africa, one of the partners behind the launch.

"We have a massive risk gap in Africa and existing solutions aren't working," Massingham said. FSD Africa is a UK government-backed development group.

The ACRF will provide protection for 1.4 billion people against floods, droughts and tropical cyclones by providing \$14bn of climate risk insurance by 2030 to African sovereigns, cities, humanitarian organisations and NGOs, the insurers said.

## **Calling for \$900m**

The group is calling for \$900m in funding from development partners and philanthropies to support the project, much of which will go towards providing a subsidy on the cost of the premium to help governments and cities with limited fiscal resources to buy the cover.

These donor funds will be held in a trust and managed by the African Development Bank.

"The facility will enable us to cover certain risks like floods, cyclones and droughts...and to help us mitigate the risks we face as underwriters dealing with these climate risks," said Philip Lopokoity, chief executive at Nairobi-based insurer Icea Lion group.

The insurance commitment is the first from the 85 signatories of the Nairobi Declaration on Sustainable Insurance, signed in April 2021 by the industry to support the UN Sustainable Development Goals.

The ACRF will provide a domestically funded alternative to global initiatives like the World Bank's Global Risk Financing Facility and the Global Shield Financing Facility, a new funding facility that will help countries that suffer heavy economic loss due to climate change-driven disasters, announced by World Bank president, David Malpass on Tuesday.
